

## SMOKE-FREE LIVING

There's a growing concern among members that second hand smoke could endanger their health and that our Co-op should become a smoke-free building and the Board of Directors is looking at the situation.

After many conversations and meetings with provincial and regional representatives, we soon realized that our situation was not unique. A rapidly growing number of communities are showing great interest in living in a smoke-free environment.

Many steps (would) will be needed before our Co-op (could) can become smoke-free and the first one is to conduct a survey. This anonymous survey will indicate whether or not, you the members, would want your Board of Directors to go ahead and investigate the matter further. Every member will have a chance to bring questions and express their opinions at a later time. A place away from the building would have to be provided for smokers to enjoy their cigarettes etc....We would provide a place, away from the building, for the smokers to enjoy their cigarettes etc...

We understand that the result of this survey will not please everyone, but always remember that in a Co-op such as ours, only the members make the final decision. This is only a survey, not a vote. Every member would will have a chance to vote at a general membership meeting at a later date if the need to proceed was determined.

This survey will **ONLY** be delivered to units showing interest by filling the box below and returnig this page to the "Office" mail box no later than Wednesday evening April/25/2012.

Board of Directors
